## UNIVERSITY PROJECTS

---

### GoBuddy: A Travel Platform That Promotes Lipa's Tourism By Leveraging Analytics | Full-Stack Developer

**Technologies:** Laravel, Tailwind CSS, MySQL, JavaScript, Livewire, Blade

- Developed a full-stack tourism platform for the Lipa City Tourism Office, enabling centralized management of tourist attractions, businesses, and user data using Laravel MVC architecture.
- Built secure CRUD dashboards for administrators, businesses, and users, including authentication, role-based access, approvals, and account management.
- Implemented interactive analytics dashboards with data visualizations to monitor tourism performance, visitor trends, sentiment analysis, and business contributions.
- Designed responsive and dynamic user interfaces using Livewire, Filament, Blade, and Tailwind CSS, ensuring seamless usability across desktop and mobile device

### LibPulse: The Heartbeat of the Latest Trends and News in Librarianship | Full-Stack Developer

**Technologies:** HTML, CSS, JavaScript, PHP, MySQL

- Developed an open-access web platform that aggregates and showcases latest news, articles, and trends in librarianship for librarians and LIS students worldwide.
- Implemented dynamic content management using PHP and MySQL, enabling efficient storage, retrieval, and display of articles and featured content.
- Designed a responsive and user-friendly interface using HTML, CSS, and JavaScript to ensure accessibility across desktop and mobile devices.
- Addressed the information gap between aspiring and professional librarians by centralizing relevant LIS news, events, and industry updates in a single platform.
